SUMMARY

PMP-certified software engineer with six years of experience building and integrating WordPress e-commerce sites with a custom .NET/SQL inventory management system, now applying that background to cloud and agentic tooling. Including Sprint Orchestrator, a service that runs a sprint autonomously against Azure DevOps.

RELEVANT EXPERIENCE

- Built a Python service that integrates Azure DevOps, Claude, and Discord APIs to build software
- Built a real-time reactive audio engine in C#/NET
- Built an AI agent that processes carts and makes win back offers
- Debugged, optimized, and extended custom software built using .NET and SQL
- Used REST APIs to integrate WordPress with a custom ERP

CERTIFICATIONS

- Project Management Professional (PMP)
- Certified Scrum Master (CSM)
- Microsoft Certified: Azure Solutions Architect Expert (AZ-305)
- Microsoft Certified: Azure DevOps Engineer Expert (AZ-400)
- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Anthropic Academy Coursework, In Progress Towards CCA-F

SKILLS

Programming Languages: C#, Python, SQL, HTML, JavaScript, PHP

Cloud & Infrastructure: Microsoft Azure and Google Cloud

Tools & Practices: WordPress, APIs, .NET, Azure DevOps, AI, LangGraph, Claude

Professional: Leadership, Project Management, Data Analysis, Conflict Resolution, Communication, Market Research

WORK HISTORY

IT Specialist

June 2026 to Present

All Current | Jackson, MS

- Integrated AWS Simple Email Service (SES) into a custom inventory management system
- Facilitate meetings, knowledge transfers, and equipment installs
- Migrate corporate accounts, software, and data
- Build custom SQL scripts for advanced reporting

Remote Developer

November 2020 to June 2026

All Current (Most Electric) | Jackson, MS

- Created and managed the hosting environment for company websites on Azure and Google VMs
- Used REST APIs to integrate WordPress with a custom inventory management system
- Debugged, optimized, and extended custom software built using .NET and SQL
- Designed and built four WordPress e-commerce websites to specification
- Managed the full procurement cycle for new software and trained employees in its use
- Provided on-site IT, including setting up and maintaining phones and internet

Startup Founder

July 2018 to January 2022

ClasScape, LLC | Starkville, MS

- Led a team and collaborated with mentors to create demos, plans, projections, and presentations
- Developed a VR education tool (Unreal Engine 4, WordPress)
- Secured multiple grants and awards through competitive proposals
- Planned and executed school demos and market research to validate product-market fit.

VOLUNTEER

Team Leader

March 2021 to Present

The Sanctuary | Online Community

- Lead a 20-person volunteer team to a competitive objective through structured planning and execution
- Facilitate meetings, retrospectives, and one-on-one feedback to drive improvement
- Analyze performance data to identify gaps then implementing corrective actions
- Implement real-time contingency plans that reallocate roles under pressure to keep objectives on track
- Resolve conflicts and coordinate resources, across a volunteer roster

Projects

Sprint Orchestrator

Autonomous sprint execution service

- A Python service that orchestrates the software delivery workflow end to end, integrating with Azure DevOps, Claude, and Discord REST APIs. It validates work items, dispatches tasks to specialized AI coding agents, and runs them in parallel across a worker pool. Progress and results are reported back to the team through Discord and Azure Boards, where they can review and act on them. The system is backed by fault-tolerant state persistence, rate-limit handling, and a layered automated test suite.

Cart Win Back

AI Agent that makes win back offers on abandoned carts.

- An agent that reads an abandoned ticket cart and decides what would win it back. Built in Python and LangGraph. Local ollama models are used as the LLM. A full pass costs nothing and reaches no outside LLM provider. Every data source a cart can view is retrieved and cached, state is checkpointed regularly, and the whole run is traced in LangSmith. There is a bounds layer that rejects an agent's responses if it breaches policy. Rejected responses are fed back to the agent with the rejection reason so a new response can be made.

EDUCATION

Bachelor of Science in Software Engineering, Mississippi State University, Starkville, MS (December 2018)

HONORS AND AWARDS

- ClasScape funding: \$70,500 secured across four competitive rounds, incl. National I-Corps (2019)
- 3rd place, MSU Hackstate Hackathon (2017)
- Featured Founder, MSU E-Center
